

Soltellus™ 2000L Pocket Guide

Recommended Timing by Crop

For more specialty crop applications, talk to your Soltellus™ Partner.

Alfalfa

- Mid-vegetative to late vegetative
-

Corn/Silage

- Planting to VT
-

Cotton

- At planting-bloom stage
-

Hay/Grass

- Mid-vegetative to late vegetative
-

Peanut

- Planting
 - Pegging
-

Potato

- Planting
 - Tuber Initiation
 - Beginning of Tuber Bulking
-

Sorghum/Mil

- Planting
 - 4th - 8th leaf stage
-

Soybean

- Planting to R3
-

Sugarbeet

- Planting
 - 3rd - 6th leaf stage
 - At row closure
-

Sugarcane

- Planting
 - Beginning of tillering
 - Beginning of grand growth phase
-

Sunflower

- Planting to emergence
 - Stem elongation
 - Pre-budding to budding
-

Wheat/Cereals (barley, rye, etc.)

- Planting
- End of tillering
- Flag lead emergence

Tank Mixing Sequences

Recommended order when using water/liquid fertilizer solution as the carrier.

- 1 Fill the tank halfway with liquid.
- 2 Start agitation.
- 3 Add compatibility agents and anti-foamers.
- 4 Add dry formulations, pre-slurried if needed.
- 5 **Add Soltellus™**
- 6 Add dispersed liquids.
- 7 Add remaining liquids.
- 8 Add adjuvants.
- 9 Add micronutrients/fertilizers.
- 10 Add remaining liquid to the full volume.
- 11 Measure final pH and adjust only if needed.

Use rate

1 to 2 quarts per application

Application Methods

In-furrow, 2x2, soil broadcast, side-dress, Y-drop, foliar (aerial or ground), irrigation.
