

SoltellusTM 2000L

2027 Dober Performance Guarantee for Corn and Soybeans

We know Soltellus delivers and we back that promise to our growers.

When you purchase and apply 270 gallons (540 acres) or more of Soltellus 2000L in 2027, it will pay for itself, or we'll refund the difference.*

Program Details

The Soltellus Money-Back Guarantee: Dober offers a refund if the Return on Investment (ROI) from increased yield is not positive (the value of the yield increase does not exceed the program price). The program price is the lesser of the price paid for Soltellus and Dober's 2027 recommended price of \$22 per gallon, based on the gallons applied per acre, up to the label rate. Partners set their own pricing; if a partner charges more than the recommended price, the partner is responsible for the difference on any claim. The refund equals the difference between the program price and the value of yield generated. Grower to apply Soltellus as a yield enhancer while maintaining their current fertilizer application practices.

ELIGIBILITY

This program applies to corn and/or soybeans in the 2027 growing season. An eligible grower must purchase Soltellus 2000L and apply a minimum of 270 gals per label rate (0.5 gal/acre) at the recommended timing.

CALCULATION

Value of yield is determined by the difference between treated and untreated (within each field) yield/acre, averaged across all of the grower's qualifying check strips for that crop (weighted by acres), and multiplied by the 2027 projected crop insurance price for that crop (as reported by USDA RMA by the regional sales closing date; the harvest price is not used). The crop insurance price is a benchmark only; no insurance claim is required. The maximum payout/acre from Dober for the Performance Guarantee is the program price; Dober will not refund more than the program price. Weather events such as hail, wind, or flooding can sometimes damage the treated and check-strip areas unevenly, which may affect the accuracy of the yield comparison. In these situations, Dober will work with the grower to adjust the claim so it reflects Soltellus's actual performance, which may include limiting or excluding the affected comparison from the calculation.

DEDICATED PROGRAM SUPPORT

Dober will coordinate directly with the grower and their partner before planting when a grower has submitted a Guarantee claim in a prior season or is purchasing and applying more than 5,000 acres of Soltellus 2000L in a season, to confirm the program is set up for the greatest success, which may include additional check strips or data. Dober determines the terms of Guarantee coverage for these growers based on this coordination.

REQUIREMENTS

A claim requires a grower to provide agronomic data to qualify. The claim submission deadline is December 1, 2027.

REQUIREMENTS TO FILE A CLAIM

1. Apply minimum of 270 gals (540 acres treated) to corn and/or soybeans.
2. Minimum of 5% check strip per field applied (check strips must be in the same field as the applied Soltellus).
3. Soltellus invoice paid in full by 7/31/2027.
4. Submit agronomic (applied and harvest) data to Dober by 12/1/2027.

**Dober's refund is limited to the program price. See Program Details and Calculation for full terms.*
